

RegWiz User Testing Plan

We'd like to choose around 5-10 participants to test our app, each participant are expected to give us feedbacks with the following questions we are planning to ask:

- "What do you feel/think about the app RegWiz?"
- "Is there any features we can add or improve?"
- "Did you encounter any problems?"
- "Would you consider using this app once it's ready to go?"

Since right now our JSON file only includes upper division CSE courses, it would make sense if we test this app on CS major students. So an ideal location for user testing would be in the CSE basement where 90% people there are CS major students. We are planning to give out small rewards for willing to test out our app (help them with the homework they are stuck on, a cookie, snack or drink)
